

Customization + extensibility

Part of the "Getting Started with Positron" workshop

Settings

Settings

- Nearly every part of Positron's editor, user interface, and functional behavior has customizable options.
- Settings can be customized at two different scopes:
 - **User settings:** Settings that apply globally to any instance of Positron you open.
 - **Workspace settings:** Settings stored inside your workspace (folder) and only apply when the workspace is opened.
- Positron stores setting values in a `settings.json` file.
- Settings can be changed by:
 - editing the settings JSON file or
 - using the Settings editor interface

Updating user settings

To update using the UI:

- In the Command Palette:
Preferences: Open User Settings
- In the top menu:
Positron > Settings... > Settings

To edit the JSON file:

In the Command Palette:
Preferences: Open User Settings (JSON)

Your turn

Customize user settings

- Update your user settings to change the Icon Theme to Minimal via the Settings editor interface.
 - Hint: Filter for settings with the word “icon”.
- Open the user `settings.json` file to confirm the change you made.
- In the user `settings.json` file, change the Icon Theme to `vs-seti` and save your changes.
- Go back to the Icon Theme settings in the Settings editor interface and confirm the change you made in the JSON file.

Workspace settings

- Workspace settings are specific to a project and override user settings.
- Positron (like VS Code) stores workspace settings at the root of the project in a `.vscode` folder, making it easy to share settings with others in a version-controlled (e.g., Git) project.

Updating workspace settings

To update using the UI:

- In the Command Palette:
Preferences: Open Workspace Settings
- In the top menu:
Positron > Settings... > Settings

To edit the JSON file:

In the Command Palette:
Preferences: Open Workspace Settings (JSON)

Your turn

Customize workspace settings

- Update your workspace settings in the `positron-workshop-project` using the Settings editor interface.
 - You can update whatever setting you like.
 - If you need inspiration, change the font size in the editor.
- Open the `settings.json` file in the `.vscode` folder of your project to confirm the change you made.
- Click on the Source Control icon in the Activity bar and view the diff created by updating your settings. Contrast this to what happened (or didn't happen) in the Source Control when you updated your user settings.

VS Code docs are good
resources for understanding
how Positron works!

Keyboard shortcuts

Keyboard shortcuts

- Positron lets you perform most tasks directly from the keyboard.
- The Keyboard Shortcuts editor lists all available commands with and without keyboard shortcuts, and enables you to change, remove, or reset their keyboard shortcuts using the available actions.
- You can open the Keyboard Shortcuts editor:
 - From the Command Palette: *Preferences: Open Keyboard Shortcuts*
 - From the top menu: *Code > Settings > Keyboard Shortcuts*

Keyboard shortcuts for Command Palette actions

You can add a keyboard shortcut or customize the existing keyboard shortcut for any action you can take from the Command Palette.

Your RStudio keybindings in Positron

- You can enable RStudio keybindings in Positron with the Enable RStudio keybindings option.
- This might overwrite some of Positron's keybindings, so you might then wish to update / remove some newly enabled RStudio keybindings.

Learn more

VS Code docs: Keyboard shortcuts for Visual Studio Code

code.visualstudio.com/docs/config/keybindings

Layout

Primary side bar

- By default, the Primary Side Bar is located on the left and shows views such as the Explorer, Search, and Source Control views.
- Contents of the Primary Side Bar is controlled by what is selected in the Activity Bar.

Demo

Customizing layout

- Move the primary side bar to the right.
- Move the activity bar to the top.

Activity Bar on top,
and not blue anymore.

Customize layout control

- The title bar has buttons to toggle the visibility of UI elements.
- The rightmost button brings up the Customize Layout dropdown that gives you finer control over the visibility and layout of various UI elements.

Extensions

Extensions

- Extensions let you add languages, debuggers, tools, themes, etc. to Positron to support your development workflow (just like in VS Code).
- Your Positron and VS Code extensions are separate and won't interfere with each other.
- Unlike in VS Code, you install Positron extensions from Open VSX.

Your turn

Install extension

- Click on the Extensions icon from the Activity Bar in Positron.
- If you haven't yet done so, search for and install the Shiny or Indent-Rainbow extension.
- If you have already installed it, or if you would like to install one more extension, find and install the Solarized & Selenized extension.
- Use the Command Palette to set the theme of your Positron window to a Solarized or Selenized theme of your choice. Hint: Start typing theme in the Command Palette.

Built-in extensions

- Built-in extensions (e.g., R, Positron Python, and Markdown Language Basics) are installed with Positron.
- They can only be updated by updating Positron.
- They can be seen in the extensions view with [@builtin](#).

Demo

Built-in extensions

- Click on the Extensions icon in the Activity Bar.
- Type `@builtin` in the Extension search bar.
- Review the built-in extensions.

Built-in extensions

Bootstrapped extensions

- Bootstrapped extensions (e.g., Quarto, Air, GitHub Pull Requests) are installed *by* Positron, and act like you installed them yourself.
- They can be updated independently of updating Positron.

Other extensions

- Any other extensions need to be installed from Open VSX.
- Popular extensions you might consider installing are Project Manager, Shiny, Rainbow CSV, indent-rainbow, etc.
- You can also install Extension Packs; a collection of packs curated by users for specific tastes, tasks, or languages.
- You might get a warning about whether you trust the publisher of a theme you choose. Read the warning carefully. The decision is yours!
